Jonathan Hurst

Game/Engine Programmer & Software Engineer

Summary

I have nearly 5 years of experience in programming and almost the same in Game Development. With an expertise in C++, C#, Godot/GDScript and Unity, I have worked with multiple diverse teams on Game Jams. In my spare time, I have looked towards and created some contributions to open source projects, as well as having lots of experience working in groups, and taking charge of leading features. I am very creative with my solutions, and I always look for ways to simplify, optimise, and create clean code.

Employment

Luware LTD, UK
July 2025 - present
Junior Software Engineer

- Lead backend upgrade to .NET 10
- Created and documented a novel solution to fixing an issue related to differences in operating systems
- Worked in my team on multiple brand new features, including a public API interface

Education

Abertay University
Sept 2023 – Present
Computer Games Technology BSc (In Progress)

- **Professional Project – Grade A:** Programmer on a multidisciplinary team working on a co-op multiplayer, which was created over the span of a full semester.
- **Game Engine Development – Grade A:** Created a full game engine from scratch in C++. Implementing a level editor, Jolt Physics, reflection, and an abstraction layer for the renderer.
- **DX11 Graphics Project – Grade B+:** Implemented multiple post-processing effects, shaders and rendering techniques in a DX11 rendering engine.
- **Game Programming and System Architecture – Grade A:** Worked on a cross-platform game in C++ with PS5 devkits.

Projects/Open Source Contributions

Niko Engine – A Vulkan based cross-platform rendering engine created in C++
Galactic Garage - Extended from my Professional Project at Abertay University, this is a Godot game created with my team Zero Bounds Studio.
Kando - A React/Electron based desktop utility app, which allows you to open a shortcut menu for launching apps, or executing macros.

Skills

Programming Languages

- C#
- C++
- GDScript
- TypeScript/Javascript

Game Engines

- Godot
- Unity

IDEs

- Visual Studio
- JetBrains
- Zed
- VSCode
- Neovim

Version Control

- Git
- Perforce

Languages

- English (Native)

Misc

- CI/CD
- Linux
- SystemD
- Multiplayer Game Development
- UI Development

Game Jams

Global Game Jam 2025 – *Born to Krill* – Unity
Two to One Jam 2024 – *Sincantation* – Unity
AGDS Freshers Jam 2024 – *Breathing Space* – Godot
AGDS Halloween Jam 2024 – *Speed Lich* - Godot
